## **Moulding Design Engineer** **Based in Mildenhall, Suffolk, IP28 7DE**

As a UK engineering and manufacturing company; CamdenBoss designs, develops and manufactures innovative and market leading tooled products, for our own product range and customer specific applications.

With ambitious plans for further continued growth, CamdenBoss are now seeking an experienced engineer to join our Moulded Product Design Team, who will support and manage product design and manufacturing projects; from design creation, through validation to completion.

This is an exciting and varied opportunity for a passionate, motivated and ambitious individual to support our global company in achieving on-going growth objectives.

### **Key Responsibilities:**

- You will undertake various engineering tasks, to ensure moulded product designs are fit for purpose and manufacture, delivered on time, for both CamdenBoss own New Product Introduction (NPI) and customer driven projects.
- Carrying out 3D CAD product development, review component and assembly tolerance requirements, and undertake the analysis of tool designs and DFM reports.
- Work within the Moulding division of CamdenBoss and closely alongside our team of toolmakers.

### **The successful candidate will be either;**

- Experienced within a volume injection moulding design and manufacturing environment; with knowledge about materials, process optimisation & validation of new tooling
- Apprentice trained, or equivalent Mechanical or injection moulding specific qualified
- A moulding toolmaker, ideally with CAD experience, seeking to expand their career into product design

### **Skills/requirements:**

- Ability to work within a team and collaborate with others.
- Ability to work to tight deadlines.
- Well organised.
- Excellent attention to detail.
- Strong work ethic.
- Ability to take initiative and work calmly under pressure.
